

Shelf Life of Primeline Latex Tubing

Primeline certifies that the shelf life of our natural rubber latex tubing is indefinite when stored properly.

Recommended storage:

Storage should be in such a way that the tubing is protected from high temperatures, UV light, and ozone. Store at normal room temperatures 50 to 80 degrees F., in a closed box or carton, and away from UV light and ozone generating devices such as electrical motors, and electrical transformers.

Sincerely,
PRIMELINE INDUSTRIES

A handwritten signature in black ink, appearing to read "D. Zarle", is positioned above the printed name.
